-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 18-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Abele et al. (USPN 5,190,541).

Regarding claims 18 and 21, Abele et al. disclose surgical device for severing tissue, the surgical device comprising: a shaft (12) having a proximal end and a distal end; a hook member (42 and 16 collectively) at the distal end of the shaft, the hook member configured to capture a vessel, a plunger or sliding member (both elements labeled 54, collectively) movable with respect to the hook member from a first position to a second position and having a movable cutting blade (distal end of 56) housed therein, where the captured vessel is situated between the hook member and the cutting blade; and at least one electrode (distal ends of 54) separate from the hook member and the cutting blade for applying RF energy to cauterize the captured vessel, see col. 3-6 and figures 1-7.

Regarding claim 19, Abele et al. further disclose the at least one electrode is two electrodes (the two distinct distal ends of the first and second 54) separated by a dielectric (the two thin sections of 12 located between the two 54's and 56, see figure 4 and col. 5, lines 33-58).

Regarding claim 20, Abele et al. further disclose the hook member is at least partially slidingly disposed within the shaft, see co. 3-6 and figures 1-7.

Response to Arguments

Applicant's arguments with respect to claim 18-21 have been considered but are moot in view of the new ground(s) of rejection.
